BUILDING ON THE PAST, POSITIONED FOR THE FUTURE

INTRODUCING THE ALL-NEW RAPIDMATCH™ XI SPECTROPHOTOMETER

Combining revolutionary optical power, color camera images and an intuitive touchscreen user interface—the all-new RAPIDMATCH™ XI spectrophotometer from PPG will revolutionize your next collision or commercial repair.
**KEY FEATURES**

- Total of 16 geometries (11 color angles and five camera angles)
- Six blue enhanced LEDs
- Magnified image of the surface to avoid defects and scratches
- Color camera provides texture information
- Rechargeable lithium-ion battery
- Ceramic-keyed calibration tiles
- Multilingual capability (18 languages)
- Audio and visual level indicators to improve surface contact for reading
- Touchscreen interface
- Capture job details (make, model, year)
- Seamless connectivity with PAINTMANAGER® XI software
- Wi-Fi enabled

This third-generation device leverages PPG’s 25 years of experience for delivering sophisticated instrument measuring techniques that provide high accuracy measurements with the added confidence of Match Rating and Texture information.

The RapidMatch™ XI spectrophotometer combines 11 color angles and five texture angles for a total of 16 geometries powered with six blue-enhanced LEDs, making it the most advanced technology in the industry. Technicians will be able to benefit from the five texture digital color images that provide real-time paint surface viewing.

With its advanced optics and multi-angle color measurement, the innovative technology reads the actual vehicle color at critical angles, then teams with PPG’s extensive color database of prime, variant and special field formulas to help find the best blendable match. The result? Technicians have all necessary information to make the right choice when reaching a final color decision.

**BETTER, FASTER AND EASIER TO USE**

The foundation for the color-matching prowess of this advanced tool lies in an extensive color formula database containing reflectance and image characteristics, as well as high-level mathematics that deliver “target to match” returns to the end user—efficiently and accurately.

The RapidMatch XI spectrophotometer connects seamlessly with PPG’s industry-leading PaintManager XI software to retrieve formula match information with speed and efficiency. The software features an updated interface with an intuitive, visualized workflow to improve the overall user experience. It also includes:

- Match Rating (MR) visual indicators
- Effect Coarseness (EC) visual indicators
- Texture and Image comparisons for visual match
- Five additional angles of digital color camera images that show color travel
